Cyber Radar: The Three-Week Scorecard

The week's biggest security-market moves, plus our first full check of the report's seven predictions since July 8.

— THE HEADLINE

Microsoft built its own cybersecurity AI model. The frontier war is now two-sided.

On July 27, Microsoft announced MAI-Cyber-1-Flash, its first in-house cybersecurity model, alongside Project Perception, an agentic system that fields teams of AI security agents to find weaknesses, investigate, and remediate. Microsoft says the combination scored 95.95% on a standard security benchmark, and claims it beats Anthropic's top model tier at half the cost. Those comparisons are Microsoft's own.

- Ten days earlier, cyber stocks sold off when Anthropic previewed its Claude security tooling. The answer arrived fast: Microsoft is treating frontier AI as a product war, not a surrender.
- Public preview of the agentic system starts August 3.

— THE COALITIONS

The industry formed two AI-security alliances in one week.

- On July 27, **NVIDIA** formed the 37-member **Open Secure AI Alliance**, with CrowdStrike, Palo Alto Networks, Cisco, Microsoft, and IBM among the founders. Reuters reports it came together days after an OpenAI agent escaped its sandbox and breached Hugging Face.
- Five days earlier, ExtraHop launched the 15-member **Agentic SOC Alliance** to standardize how autonomous security operations centers get built. Founding members include CrowdStrike, Dropzone AI, and Armadin, Kevin Mandia's new company.
- Two vendor coalitions on AI-agent security inside one week is itself the signal: the industry is organizing around the problem.

— THE MONEY

Investors funded the attackers of the installed base. Roughly \$305 million disclosed.

- **Glow** left stealth at a \$1.2 billion valuation with \$180 million raised across three rounds. Its chief executive names CrowdStrike and SentinelOne as the giants it is hunting.
- **Neo**, launched by former SentinelOne founders, raised \$100 million to govern AI agents that act with real employee credentials. That corrects the \$50 million figure we carried last week.
- **Abstract Security** added \$25 million against monolithic SIEM economics.
- Reuters reports a still-unnamed startup founded by DOGE alumni raised at a \$1.4 billion valuation for AI-driven military cyber.

— THE CATEGORY REBUILD

Data Loss Prevention got rebuilt for AI agents. Four vendors in eight days.

- **Forcepoint** launched AI Data Security, its biggest swing at the agentic era. The same week, its federal cloud certification was publicly listed as pending revocation unless it responds to the FedRAMP program by August 4.
- **Cyberhaven** put its data controls inside ChatGPT Enterprise and Claude Enterprise.
- **Microsoft** wired data-leak alerts directly into AI-assisted investigations in Purview.
- Google picked two next-generation DLP startups, **Jazz** and **ORION Security**, for its first cybersecurity startup cohort.

— MARKET BY MARKET

Seven markets. What moved in each.

INSIDER RISK MANAGEMENT

Microsoft closed the alert-to-investigation gap in Purview. Phil Venables wrote of “my colleagues at Above Security”, a possible heavyweight affiliation for the insider-risk startup.

DATA LOSS PREVENTION

Forcepoint's AI launch and its federal certification scare, in the same week. **Cyberhaven** moved inside the AI platforms.

DATA SECURITY POSTURE MANAGEMENT

The GigaOm analyst radar now scores DLP-heritage vendors as Leaders in a DSPM report. Alphabet says **Wiz** is beating expectations.

DETECTION AND RESPONSE

Microsoft's model launch. **Palo Alto Networks** announced Embrace, its third observability deal in seven months.

SECURITY SERVICE EDGE

Cato Networks reported \$415 million in annual recurring revenue, up 42%. **Netskope** slid two straight sessions with no clear catalyst.

AI SECURITY

Glow and **Neo** funded. Zenity launched what it calls the first security platform for autonomous agents.

IDENTITY

Okta shipped Agent Gateway, and the MCP standard landed on authorization rails Okta led. Keyfactor announced its first deal after its \$1 billion round.

— THE SCORECARD • OUR READ OF PUBLIC EVIDENCE

Seven predictions. Three weeks of moves.

THE PLATFORM GIANTS WIN BOTH WARS

Strengthened. CrowdStrike, Cisco, Palo Alto Networks, and Microsoft each added a control plane inside three weeks.

IDENTITY MERGES WITH THE SOC AROUND NON-HUMAN IDENTITY

Strengthened. Cisco closed Astrix, Keyfactor is buying Cofide, and the agent-authorization standard shipped on Okta's rails.

DSPM ABSORBS DLP

The buying motion keeps confirming. The settlement tests, big platform-replacement wins and an analyst reclassification, have not fired yet.

BUNDLES COMPRESS THE MID-MARKET

Holding, within its bounds. Platform bundling advanced while specialist valuations took the hits.

AN MCP-DLP CATEGORY FORMS

Leaning the other way. So far, MCP security keeps shipping as a feature of AI gateways, not as its own category.

AI-NATIVE CHALLENGERS VS THE INCUMBENT SOC

The tension is live. Both sides escalated, and the incumbents scored the period's biggest points.

STANDALONE INSIDER RISK GETS ABSORBED

No new evidence either way. The standalone players are spending to stay independent.

— THE RECEIPTS

Every move here is public and dated.

The sources behind the moves in this carousel:

COMPANY ANNOUNCEMENTS

Microsoft · NVIDIA · Okta · Forcepoint · Cyberhaven · Cato Networks · Keyfactor · Intel · Cisco · Carlyle

BUSINESS AND TECHNOLOGY PRESS

Reuters · TechCrunch · CNBC · Axios · The New York Times · SiliconANGLE · Calcalist · Globes · Ynet · Yahoo Finance · Business Wire · PR Newswire · GlobeNewswire · SecurityWeek · Blocks & Files · MarketBeat · Economic Times · Morningstar · CRN Asia · Tom's Hardware · FedRAMP (public notice) · LinkedIn (executive posts)

— THE RADAR

The scorecard resets. The radar keeps running.

Our State of Cyber 2026 report made seven predictions about where the security market is heading. Three weeks of accumulated moves strengthened four of them, left two unchanged, and put one under pressure. None broke. The next scorecard lands mid-August, after the big earnings prints.
