Cyber Radar: Week of July 13

This week's biggest moves in the security market, in plain language.

— THE HEADLINE

Wall Street's new idea: AI attacks make security budgets grow.

On July 6, analysts at Scotiabank upgraded two security stocks. Their logic is simple: AI can now find weak spots and run attacks on its own. Companies will spend more to defend against that.

- **SentinelOne**: price target raised to \$23.50 from \$16. Shares jumped 6 to 7 percent.
- **Okta**: upgraded with a \$165 price target.
- **CrowdStrike** rose 5 percent and **Palo Alto Networks** 4 percent on the same day.

— DATA SECURITY

Microsoft keeps pulling data protection into one product: Purview.

- Microsoft will retire the file rules in **Defender for Cloud Apps** on January 6, 2027. All of that work moves into **Microsoft Purview**.
- Purview will also cover apps outside Microsoft, starting with **Box and Google** (now in preview).
- Purview is also getting an AI agent that Microsoft says finds data risks and suggests fixes. It rolls out worldwide through late July.

Data Loss Prevention (DLP) is software that stops sensitive files from leaving a company.

— IDENTITY

The big money in identity is moving from people to machines.

- **Palo Alto Networks** relaunched CyberArk as **Idira**: one identity platform for human, machine, and AI-agent accounts (launched in May).
- **Keyfactor**, which secures machine identities (certificates, keys, devices), raised **\$1 billion**.
- A new company, **ModelCop**, launched an identity product for AI agents and other machine identities.

Machine identity means the accounts, certificates, and keys that software and AI agents use to log in, not people.

— PRICING

Google put a price on the AI security analyst: pay per use, not per seat.

Google now sells "Security Tokens" in its security product: you pay each time one of its AI security agents does work.

As far as we can tell, it is the first big cloud provider to charge for AI security agents by usage, and it may become the template for the whole category.

— MARKET BY MARKET

Seven markets. What moved in each.

INSIDER RISK MANAGEMENT

A quiet week. No deals or launches. Vendor marketing leaned hard into AI assistants as the new insider.

DATA LOSS PREVENTION

Microsoft pulls more data protection into Purview. **Akamai** completed its ~\$205M purchase of browser-security company **LayerX**.

DATA SECURITY POSTURE MANAGEMENT

Varonis launched protection for **Cursor's** AI coding agents while they work.

DETECTION AND RESPONSE

The Scotiabank upgrades, plus **Google's** pay-per-use pricing for AI security agents.

SECURITY SERVICE EDGE

Cato Networks made it much easier for partners to resell its product. **Netskope's** anchor investor bought \$7.2M more stock.

AI SECURITY

MCP, the standard that connects AI agents to tools, is set for a major security upgrade on July 28. The UK launched a national AI cyber-defense program.

IDENTITY

SailPoint drew a shareholder investigation. **Keyfactor** raised \$1 billion for machine identity.

— THE RECEIPTS

Every move here is public and dated.

The sources behind the moves in this carousel:

COMPANY ANNOUNCEMENTS

Microsoft · Palo Alto Networks · Varonis · Google · Cato Networks · Akamai · Model Context Protocol project

BUSINESS AND TECHNOLOGY PRESS

Yahoo Finance · Seeking Alpha · 24/7 Wall St · SecurityWeek · SiliconANGLE · Crunchbase News · CIO Influence · PR Newswire · GlobeNewswire · The Motley Fool · CTech (Calcalist) · InfoQ
