Cyber Radar: Week of July 20

This week's biggest moves in the security market, in plain language.

THE HEADLINE

CrowdStrike bought the technology behind XM Cyber. One deal, two moves.

On July 16, CrowdStrike agreed to buy the patents and source code of XM Cyber, the attack-path company Germany's Schwarz Group bought for \$700 million in 2021. The unusual part: CrowdStrike gets the technology, not the customers or the business. XM Cyber keeps operating on its own.

- The same deal puts CrowdStrike's Falcon platform on **STACKIT**, Schwarz's European sovereign cloud. In our read, European digital sovereignty is becoming a distribution channel for American security vendors.
- A day earlier, CrowdStrike named **AJ Shipley**, a former Splunk executive, as Chief Product Officer. His stated focus: securing AI agents.

— THE RUMOR

Israeli press reports Cyera is in talks to buy Oasis Security for about \$1 billion.

Globes, Calcalist, and Ynet reported this week that **Cyera**, the data-security company valued at \$12 billion in June, is in advanced talks to buy **Oasis Security**, which secures non-human identities. **This is a rumor, not a done deal.** But the shape matters: a data-security leader buying the identity layer for AI-agent accounts would repeat the combination Palo Alto Networks built when it bought CyberArk.

Non-human identity means the accounts that software, machines, and AI agents use to log in, not people.

— THE MONEY

Investors funded the AI-agent security stack this week.

- Oak left stealth with a \$60 million seed round, reported as one of the largest ever for an Israeli cyber startup, to clean up the permissions mess AI agents create.
- Former SentinelOne leaders raised **\$50 million** for a stealth startup called **Neo Security**.
- **Beacon Security** raised a \$13 million seed round for a data layer that feeds AI security agents.
- **1Password** and Anthropic launched a way for an AI agent to log in and complete tasks without ever seeing the password. **Varonis** extended its runtime protection to Anthropic's full Claude suite.
- A survey of 107 enterprises found **54% have already had an AI-agent security incident**.

— LEADERSHIP

Microsoft's data-security chief left after 27 years, mid-consolidation.

Rudra Mitra, the corporate vice president who ran **Microsoft Purview**, the team behind Microsoft's insider-risk and data-loss-prevention products, announced his departure on July 16. No successor was named in the coverage we saw. The timing: it lands in the middle of Microsoft's aggressive push to pull data protection into one product. In our read, leadership continuity just became a real question for anyone betting on Purview.

— MARKET BY MARKET

Seven markets. What moved in each.

INSIDER RISK MANAGEMENT

Microsoft's Purview chief departed. The Federal Reserve's own watchdog called for a stronger insider-risk program at the Fed.

DATA LOSS PREVENTION

A challenger declared war: **Jazz**, with \$61 million raised, is staffing up behind an explicit campaign against legacy DLP. **Fortinet** added AI data controls to its endpoint agent.

DATA SECURITY POSTURE MANAGEMENT

Zscaler's purchase of Symmetry Systems is closed. **Varonis** and **BigID** both marketed the same Gartner customer-review award.

DETECTION AND RESPONSE

CrowdStrike's XM Cyber technology deal and new product chief. **Google** folded Wiz into what it calls an Agentic Defense platform.

SECURITY SERVICE EDGE

Zscaler took a new Santa Clara headquarters. **AT&T** is embedding Palo Alto Networks' secure-access fabric into its own network offering.

AI SECURITY

Palo Alto Networks' gateway for AI traffic reached general availability. **Check Point** disclosed it is training its own security-only AI model.

IDENTITY

The reported **Cyera** and Oasis talks. **Oak's** \$60 million seed. **Microsoft** made passkeys the default for all Entra ID users.

— THE RECEIPTS

Every move here is public and dated.

— THE RADAR

We track these seven markets every week.

Our State of Cyber 2026 report made seven predictions about where the security market is heading. The weekly radar tracks what actually happens, move by move. Next week's edition scores all seven predictions against three weeks of accumulated moves.
