ProductBeacon Research

The main stories

- **NVIDIA launched an open platform for keeping AI agents safe.** Its release names Microsoft, Palo Alto Networks, CrowdStrike and Cisco among its partners. We found no security vendor announcing a generally available product on it yet.
- **Anthropic says more than 100 security and compliance providers now offer Claude integrations.** They include Microsoft Purview, Proofpoint and Forcepoint. DTEX Systems, Securonix, Exabeam, Gurucul and Teramind were not on its list on 3 October.
- **CrowdStrike says it now sells through OpenAI's marketplace.** OpenAI says enterprise customers can use their existing OpenAI spending commitments to buy it.
- **Microsoft made controls for AI agents' tools generally available in Agent 365.** Microsoft says nearly 50 million agents have been registered since May.
- **Cribl entered the security information and event management (SIEM) market.** It says Cribl Detect is available now on its cloud service.
- **Two AI-security products planned for the end of September have no availability announcement we could find:** Okta's Agent Gateway and Proofpoint's SOC Analyst Agent.
- **Armadin raised $255.5 million at a valuation above $2.5 billion.** Reco raised $55 million and Rig Security $12 million, both for securing AI agents.
- **Cato Networks employees sold about $100 million of shares, Calcalist reports.** It also reports that Cato's plans to list its shares have been delayed.

Our view: AI companies are becoming places where security vendors plug in and sell their products. NVIDIA's partner list, Anthropic's integration list and OpenAI's marketplace each include large security platforms.

AI agents

NVIDIA launches an open safety platform for AI agents

- On 28 September NVIDIA announced the Open Agent Safety Platform. NVIDIA says OpenShell, its runtime, "traces all actions and enforces policy".
- Sentry, a watchdog in NVIDIA's reference design, runs on its BlueField data processing units.
- NVIDIA's release names partners including Anthropic, Cisco, CrowdStrike, Microsoft and Palo Alto Networks. It gives no prices.
- **Status:** Check Point says its integration is in beta. Palo Alto Networks describes its gateway on NVIDIA processors as a "forward-looking architecture".
- SentinelOne and Noma Security also announced support. NVIDIA's release does not name SentinelOne among its partners.

- **Our view:** a chip maker is putting agent controls into its runtime and hardware. Security vendors are attaching their own products to it.
- **Watch:** which security vendor first ships a generally available product on the platform.

Sources: NVIDIA, SecurityWeek, Check Point, Palo Alto Networks, SentinelOne.

Anthropic lists more than 100 providers for monitoring Claude

- Anthropic says integrations with its Claude Compliance API are "available now from over 100 security and compliance providers". It updated the list on 29 and 30 September.
- Help Net Security says the feed lets security tools review Claude Enterprise conversations, uploaded files and projects.
- **On the list:** data-security vendors including Microsoft Purview, Proofpoint, Varonis, Cyberhaven, Forcepoint, Nightfall AI, MIND and Cyera. Netskope is listed in private preview.
- **Not on the list on 3 October:** DTEX Systems, Securonix, Exabeam, Gurucul and Teramind, which sell insider-risk and behaviour analytics. Exabeam says it reads Claude Enterprise data directly.
- On 29 September MIND announced a Claude integration and Nightfall AI said it expanded its own. Trend Micro says it extended its integration to Claude Code sessions.
- **Our view:** monitoring Claude is becoming a basic requirement for data-loss-prevention tools. The AI company, not an analyst firm, now publishes the vendor list.

Sources: Anthropic, Anthropic Help Center, Help Net Security, MIND, Nightfall AI, Trend Micro.

CrowdStrike says it now sells through OpenAI's marketplace

- CrowdStrike says the Falcon platform is now available in the OpenAI Marketplace.
- An OpenAI vice-president says enterprise customers "can now use their existing OpenAI commitments" to buy partner products such as CrowdStrike's.
- CrowdStrike announced its protection for OpenAI's Codex coding agents on 2 September. The new part is the buying route. No prices were given.
- **Our view:** money already committed to an AI company can now pay for a security platform, much as cloud-marketplace commitments do.

Sources: CrowdStrike, CrowdStrike, 2 September.

Microsoft makes agent tool controls generally available

- Microsoft's September update to Agent 365 makes tools management generally available. Administrators can allow or block Model Context Protocol (MCP) servers, plugins, skills and connectors across the company.
- MCP servers are the connectors AI agents use to reach tools and data.
- **In public preview:** approving custom MCP servers, and rules that can use Microsoft Entra Agent ID. Microsoft says cost management is included with its cloud subscriptions.

- Microsoft says nearly 50 million agents have been registered since Agent 365 launched in May.
- **Our view:** controls for agents' tool calls are arriving inside the largest platform as a standard feature.

Source: Microsoft Tech Community.

Security operations

Cribl enters the SIEM market

- Cribl launched Cribl Detect, a SIEM built on its data platform. It says Detect is "available now for Cribl.Cloud customers".
- Detect includes AI triage. In August Cribl bought the technology behind Radiant Security's AI security-operations product.
- Cribl says Detect costs "up to 50% less" and is "priced on infrastructure". It gave no list prices and named no Detect customers.
- **Our view:** Cribl now competes directly with Splunk (Cisco), Microsoft Sentinel and Google in SIEM.
- **Watch:** named customers and published prices.

Source: Cribl.

IDC assesses standalone AI security-operations products

- IDC, a market-research firm, published an assessment of "Standalone AI SOC Platforms". SOC stands for security operations centre.
- Conifers and AiStrike each say IDC named them a Leader. The full list is available only to IDC clients.
- **Our view:** an analyst firm now assesses standalone AI security-operations products as their own group, separate from AI features inside larger platforms.

Sources: Conifers, AiStrike.

Other security-operations news

- **Exabeam** announced a plugin for Claude Code and OpenAI Codex, and Claude Enterprise monitoring to detect "rogue agents". It gave no availability wording.
- **Noma Security** says it finds agents and MCP servers on employee laptops and controls their use down to the individual tool. It gave no availability wording.
- **Microsoft's Project Perception** remains in preview, with consumption-based pricing and no published figures.
- **Splunk's Agent Launchpad** still has no dated general-availability statement from Cisco or Splunk.

Sources: Exabeam, Noma Security, Microsoft.

Identity

Okta's Agent Gateway: no availability announcement we could find after its target

- In September Okta said Agent Gateway was planned for general availability in the third quarter. Its investor sheet specified the calendar third quarter, which ended on 30 September.
- Okta's "What's New" page for AI agents, last updated 25 September, still lists the gateway as "GA soon" (generally available soon). We found no Okta announcement since 22 September that it is generally available.
- Okta's president of products called it "the Gateway that we've already announced", SiliconANGLE reports.
- Forrester says Okta's pricing for agent identity "is still unresolved" and "likely will be transaction-based".
- **Watch:** an availability statement from Okta.

Sources: Okta, Okta investor sheet, SiliconANGLE, Forrester.

RSA and Ping Identity add products for AI agents

- **RSA** announced RSA Agent ID. RSA says it finds agents and MCP servers, enforces policy on each call through a gateway, and sends records to the customer's SIEM.
- RSA plans general availability for two of the product's three parts on 16 November.
- **Ping Identity** released three identity agents for Google's Gemini Enterprise. It says they are available now on Google Cloud Marketplace.

Sources: RSA, Ping Identity.

Funding for AI-agent identity

- **Rig Security** emerged with a $12 million seed round. CrowdStrike's venture fund took part. Rig tells a person's actions apart from an AI agent acting under that person's account.
- **Reco** raised $55 million, led by AT&T Ventures; AT&T is also a customer. Reco maps the accounts, permissions and MCP tools that AI agents use.
- TechCrunch counts at least two dozen vendors in AI-agent security.
- The Blueprint Alliance, which Okta formed with 11 other companies on 22 September, listed no new members on its site on 3 October.

Sources: SecurityWeek, Rig Security, SecurityWeek, Reco, TechCrunch, Blueprint Alliance.

Data security and insider risk

Everfox, DTEX Systems and Gurucul: hires, expansion and an analyst placement

- **Everfox** named a Managing Director for its international business and says it is expanding its UK staff by roughly 40%.
- **Everfox and the FBI** say insider-threat monitoring is "fully operational" across multiple FBI networks, covering "tens of thousands of endpoints". The 23 September announcement was not in last week's summary.
- **DTEX Systems** says QKS Group named it a Leader in its third-quarter 2026 insider-risk report.
- **Gurucul** hired Varun Kohli as Chief Marketing Officer, The CyberWire reports.
- **Our view:** these are signs of standalone insider-risk vendors investing, not consolidating.

Sources: Everfox, Everfox, FBI, DTEX Systems, The CyberWire.

Data loss prevention moves into more products

- **Sublime Security** says it made email data loss prevention generally available, in the same console it uses for incoming email threats.
- **Thales** announced a data security posture management (DSPM) product that can encrypt or mask the exposed data it finds. Thales says it is "the first purpose-built DSPM offering" to do so.
- **Cyera** says it added features to its data-loss-prevention product and listed Cyera on Snowflake Marketplace. It says details of combining Oasis Security's identity product come "in the coming months".
- **US Department of Veterans Affairs** signed a five-year order worth up to $49.6 million for data loss prevention and data access governance, through a reseller, on 25 September. The software maker is not named.
- **Microsoft Purview** data loss prevention for non-Microsoft apps, such as Box and Google Workspace, is still in preview.

Sources: Sublime Security, Thales, Cyera, OrangeSlices AI, Microsoft Learn.

Secure edge

Cato Networks employees sell about $100 million of shares, Calcalist reports

- Employees sold about $100 million of Cato Networks shares, Calcalist reports. It calls this the second such sale in 15 months.
- Globes says some existing investors also sold.
- Buyers, price and valuation were not disclosed.

- Calcalist says Cato's plans to list its shares "have been delayed amid weaker public-market conditions".
- **Our view:** Cato is rewarding staff through private share sales rather than a listing, for now.

Sources: Calcalist, Globes.

Other secure-edge news

- **Zscaler** promoted Sanjay Yadave to lead Asia Pacific and Japan, trade press reports. Zscaler holds its Investor Day on 6 October.
- **Cloudflare** says every generally available feature from its launch week that is on its Enterprise plan is also on its pay-as-you-go plan. It says its data platform, Cloudflare Basin, is generally available.
- **Palo Alto Networks:** Japanese carrier KDDI launched a service connecting its corporate networks to Prisma SASE, Palo Alto Networks' secure-edge product.
- **Akamai** expects about $5.5 billion of capital spending over its initial Anthropic contract, S&P Global reports. Analysts still expect security to be Akamai's largest business in 2026.
- **Check Point** and Clalit Health Services, which has more than 5 million members, announced a partnership. They say they will jointly develop an AI gateway.
- **Netskope's** Agent Action Control has no general-availability announcement we could find. Netskope says it will be available at the end of its current quarter.

Sources: SecurityBrief, Cloudflare, Cloudflare Basin, Palo Alto Networks, S&P Global, Check Point.

Funding at a glance

Company	What it does	Round	Lead investor
Armadin	AI agents for offensive security testing	**$255.5 million** Series B; valuation above $2.5 billion	Andreessen Horowitz and Accel
Reco	Maps what AI agents can access	**$55 million**	AT&T Ventures
Modulate	Detects deepfake voices	**$25 million**	Future Ventures
Rig Security	Identity security for AI agents	**$12 million** seed	Ten Eleven Ventures and Brightmind Partners
Osavul	Risk intelligence across online and physical threats	**$10 million** Series A	33N Ventures

Company	What it does	Round	Lead investor
RemoteThreat	Offensive security operations	**$7 million** pre-seed	Osage University Partners and DataTribe (no lead named)

- Kevin Mandia founded Armadin. Its round was the largest we found this week.

Sources: SecurityWeek and Reuters. Each round is linked in the full source notes.

Acquisitions at a glance

Buyer	Target	Status	Price
Airbus	Quarkslab	Completed 1 October	Not disclosed
SGS	Prescient Security (majority stake)	Announced as acquired 2 October	Not disclosed
TRG	Fentron	Announced as acquired 30 September	Not disclosed
Indra	TRC (30% stake, option to reach 100%)	Agreed; conditions pending	Not disclosed
Epiq	Canopy	Announced 25 September	Not disclosed
Quorum Cyber	Ontinue	Signed; not closed	Not disclosed
Upwind	Aegis	Announced 23 September; no completion statement found	Not disclosed by Upwind

- We found no acquisition announced or closed by a security platform vendor this week.

Sources: company announcements, Dealroom News, SecurityBrief and The CyberWire. Each deal is linked in the full source notes.

Prediction updates

Our seven predictions from the State of Cyber report, checked against the evidence since 12 September. These are our interpretations, and they include evidence from earlier weekly summaries.

Prediction	Our assessment
Large platforms win across data security and broader security platforms	**Supported** (unchanged)
Identity and security operations converge through machine and agent accounts	**Supported** (unchanged)
Data-posture platforms absorb data loss prevention	**Buying trend supported; replacement not established** (unchanged)
Bundled products squeeze specialists in the mid-market	**Supported within that scope** (unchanged)
Securing AI tool calls becomes a distinct category	**Weakened** (was mixed)
AI-native challengers keep a distinctive edge in security operations	**Weakened** (unchanged)
Standalone insider-risk brands are absorbed into broader platforms	**Unchanged**

Prediction 1: large platforms win across both markets

- Microsoft announced a public preview of SIEM features in Defender as a licence benefit on 23 September. On 30 September it said its agent tool controls are generally available.
- NVIDIA's partner list names Microsoft, Palo Alto Networks, CrowdStrike and Cisco. CrowdStrike says it now sells through OpenAI's marketplace.
- Specialists still raise large rounds. Cyera raised $400 million and says it is valued at over $12 billion; Island raised $400 million at $6.4 billion.
- **Our assessment remains supported.** The platforms keep broadening, but the outcome in large enterprises is not settled.

Prediction 2: identity moves toward machine and agent accounts

- Omada bought EmpowerID on 24 September. Omada says the combined platform lets companies decide in real time what each AI agent may do.
- RSA says its agent gateway, planned for general availability on 16 November, will send records to the customer's SIEM. Rig Security separates a person's actions from an agent's under the same account.
- Okta says its planned gateway will log every interaction between agents and tools. We found no availability announcement for it yet.
- **Our assessment remains supported.**

Prediction 3: data-posture platforms absorb loss prevention

- Cyera keeps adding data-loss-prevention features. Microsoft said in September that network-level data loss prevention is generally available.
- Data loss prevention is also moving into email products, such as Sublime Security's. MIND raised $72 million as a standalone vendor.
- **Our assessment is unchanged:** the buying trend is supported. We found no disclosed replacement win or analyst reclassification yet shows loss prevention becoming a module.

Prediction 4: bundles squeeze the mid-market

- Microsoft calls its new SIEM features "a benefit" of its top licences. It lists $2.40 per GB for eligible customers' outside data from 1 October, and says regional pricing may vary.
- Cloudflare says its generally available launch-week features on Enterprise plans are also on pay-as-you-go plans. Okta says agent sign-on is included in its core product.
- **Our assessment remains supported for the mid-market and new deployments.** Lost specialist revenue has not been shown.

Prediction 5: securing AI tool calls becomes a distinct category

- Tool-call controls are arriving inside larger products: Microsoft Agent 365 (generally available), Okta and Netskope (planned), and RSA (two parts planned for 16 November).
- NVIDIA puts enforcement into its own runtime. Varonis quotes Gartner defining its new AI application security market as "technologies that protect enterprise-developed AI applications and agents".
- Small dedicated vendors still raise money and announce products. Outerlimit, Kontext Security and Eve Security raised money; Noma Security says it extended its controls to laptops.
- **Our assessment moves from mixed to weakened.** The prediction runs to the first half of 2027.

Prediction 6: AI-native challengers keep a distinctive edge

- In September we read Zscaler's agentic security-operations product, which Zscaler says is available globally, as meeting the test that weakens this prediction.
- Since then incumbents' delivery has been uneven. Cisco and Splunk do not call the new agent skills generally available.
- We found no availability announcement for Proofpoint's agent after its end-of-September target. Microsoft's Project Perception is in preview.
- Conifers and AiStrike say IDC has published an assessment of standalone AI security-operations products. Cribl entered SIEM with AI triage.
- **Our assessment is unchanged at weakened.** The new evidence cuts both ways.

Prediction 7: standalone insider-risk brands are absorbed

- We found no acquisition of a standalone insider-risk vendor since 12 September.

- Everfox, Gurucul and DTEX Systems are hiring, selling and claiming analyst placements as independents. We found no round or share listing by any of them.
- **Our assessment is unchanged.** A lack of deals does not show absorption, and the hiring does not show lasting independence.

Supporting sources: the stories above and the full source notes, including earlier announcements used to assess the predictions.

Stories to watch

Proofpoint and Varonis

- Bloomberg's 2 September report of acquisition talks remains unconfirmed at 31 days. We found no comment, denial or rival bid.
- Varonis has made no filing with the US securities regulator since 29 July.
- **Watch for:** a company announcement, a regulatory filing or a denial.

Source: SEC filing index.

Dates that passed

- **Okta Agent Gateway:** planned for the third quarter. Okta's page still says "GA soon" (generally available soon).
- **Proofpoint SOC Analyst Agent:** on 3 September Proofpoint expected general availability by the end of the third quarter. Its newsroom has posted nothing since 22 September.

Sources: Okta, Proofpoint.

Deals and launches still pending

- **Quorum Cyber and Ontinue:** signed; the companies operate independently until the deal closes.
- **Upwind and Aegis:** announced; no completion statement found.
- **Netskope Agent Action Control:** Netskope says it will be available at the end of its current quarter.
- **Splunk Agent Launchpad:** no dated general-availability statement.

Coming events

- **SailPoint Navigate, 5–8 October,** with an analyst and investor webcast on 14 October.
- **Zscaler Investor Day, 6 October.**
- **Fortinet results, 28 October; Check Point results, 2 November.**
- **Microsoft Ignite, 17–20 November.**

Sources: SailPoint, Zscaler, Fortinet, Check Point, Microsoft.

Sources

The full source notes link each reported development to company announcements, regulatory filings or named publications. Earlier announcements supporting the prediction updates are included there.
